

FORELLI – Shower Trolley
Pushbutton functionality

FORELLI

The shower trolley from HORCHER – top quality, modern design, top functionality

Horizontal drop sides make it is easy to move the patient onto the soft, ergonomically designed trolley bed.

The drop sides of the FORELLI are raised electronically for moving the patient safely to the bath. In this position the FORELLI is used like a conventional shower trolley.

All functions of the FORELLI can be operated using the foot switches on both sides of the chassis. The bed of the FORELLI is raised in the middle to automatically bring the patient into a safe, stable side position.

Foot switches for easy, convenient operation ...
